gewaschen

- >> The WINDSTOPPER® jacket has a two-way zipper and two large patch pockets. It has a highly elastic and adjustable concealed drawstring cord in both the inner collar and the hem.
- >> The inner pocket on the left hand side will easily hold sunglasses and a mobile phone. The right hand side features a zipper pocket, which can hold a wallet.
- >> The zippers and pockets can be opened and closed with gloved hands.
- >> The drawstring cord and toggle are covered by two corners, which have been worked into the inner hem of the WINDSTOPPER® garment.
- >> The call sheet clip band can be printed for each specific film production.
- >> Meets the international standard ENV 343 (weather protection).

7. Technical drawing

- Rechte Innentasche = inside pocket, right hand side
- Linke Innentasche = inside pocket, left hand side
- Verdeckte Reißverschluss-Frontblende mit Druckknöpfen = concealed zipper decorative facing with press-studs (front)
- Walkie-Talkie-Tasche = walkie-talkie-pocket

inner jacket:

- Rechte Innentasche = inside pocket, right hand side
- Linke Innentasche = inside pocket, left hand side
- Innere Saumecke = inside corner hem
- Abdeckbänder (bei Nicht-Tragen des Walkie-talkies) = covering bands (if the walkie-talkie is not needed)

Headlines inner jacket

- soft, large outer pockets
- easy operation
- removable walkie-talkie-pocket
- two inside pockets
- designer jacket
- call sheet clip
- ideal for indoor and outdoor shoots
- functional fabrics

- removable, reversible hood for inner and outer jacket
- durable, protection and comfort
- walkie-talkie handset loop
- adjustable drawstring
- impermeable to wind
- breathable

8. The WINDSTOPPER® 3-layer-laminate „Glacier“

is made out of a PTFE-membrane, which is sandwiched between two fleece layers. Outer-fleece, middle WINDSTOPPER® membrane, inner-fleece. „Glacier“ offers perfect protection from wind chill and icy temperatures. The ideal body temperature is retained and its breathable function is especially important for hard, physical work. Maximum comfort and unrestricted freedom of movement are guaranteed by a minimum of weight and thickness. In fair weather, you can protect yourself from the wind, which is important, as the wind lowers body temperature and with that your energy levels. Stops the windchill effect and protects your microclimate.

9. Care of the outer and inner jacket

The jacket can be either machine washed or dry-cleaned. The function of the GORE-TEX® membrane will remain intact even after repeated cleaning. Outer and inner jackets must be cleaned separately. To achieve an additional protection against rain, the WINDSTOPPER® jacket can be worn in combination with the outer jacket.

10. GORE-TEX® membrane:

waterproof and windproof due to the breathable membrane of the fine micro pores made of Polyetrafluorethylen (PTFE). This is not a fabric in itself, but a very light, thin and hardwearing „functional layer“ which is processed together with a fabric. The GORE-TEX® membrane is worked into the jacket between outer layer and lining. It has a unique micro-porous structure made of the above mentioned materials. **Laminate:** permanent connection between the membrane and a „carrier“ material of fabric or

fleece. **GORE-TEX® 2-layer-laminate „Basel“:** consists of a membrane, which is fused with the outer fabric and becomes one entity. The lining is unattached.

11. Material

outer jacket:
GORE-TEX® 2-layer-laminate „Basel“

outer jacket - lining material:
is impregnated

inner jacket:

WINDSTOPPER® 3-layer-laminate „Glacier“

12. Function principle:

- WINDSTOPPER® membrane
- Polyester-Fleece = polyester-fleece
- Wind = wind
- Körperfeuchtigkeit = perspiration
- Polyester-Fleece = polyester-fleece

The construction:

The extremely light and flexible WINDSTOPPER® membrane is worked invisibly between two fleece layers.

GORE-TEX® membrane

- Obermaterial = outer fabric
- Wind = wind
- Kälte = cold
- Regen = rain
- Innenfutter = inner lining
- Wasserdampf = vapour
